

Identifying & Managing the Risk: Paragon Insider Threat Solutions

An organization's people are both its strongest asset and its greatest security vulnerability. That's why it's critically important for organizations of all sizes, from small businesses to multinational corporations, government departments and agencies, to have proactive programs in place to combat the potential threats posed by individuals entrusted with access to or knowledge of the organization's resources.

Paragon offers a variety of solutions, tailored to your organization's unique mission, culture, critical assets, and risk landscape, to detect and identify, assess, and manage insider threats.

Detect & Identify

Detecting and identifying potential insider threats requires both human and technological elements. We specialize in:

Investigations - Conducting thorough pre-employment screening and continuous evaluation (CE) with the utmost discretion, professionalism, and integrity.

Monitoring - Using advanced proprietary and trusted third-party technologies, in conjunction with human sensors, to mine diverse datasets for anomalies, such as physical or computer access records and online communications, that could indicate potential insider threats.

Inspections - Performing onsite evaluations of physical infrastructure and information systems to identify vulnerabilities and recommend appropriate countermeasures to mitigate insider threats.

Assess

Organizations with a fully developed insider threat assessment process provide a means to intervene to prevent an incident or mitigate its impacts. We can help by:

Training & Awareness - Developing training and awareness programs that teach the importance of identifying and reporting potential insider threats and how the individual is the first line of defense in protecting the organization.

Threat Assessments - Through physical and virtual investigative means, compiling and analyzing information about a person of concern who may have the interest, motive, intention, and capability of causing harm to your organization to inform decision-making regarding how to respond.

Manage

Proactively managing insider threats can change or stop the trajectory of events from a harmful outcome to an effective mitigation. We offer:

Program Management - Developing and implementing holistic strategies to prevent, protect against, and mitigate insider threats, with a focus on both protecting safety and caring for persons of concern.

Protective Services - Rapidly deploying highly trained and experienced, fully licensed security professionals to protect individuals who may be targeted by threat actors.

Paragon: A Trusted Partner

Paragon provides innovative, cost-effective solutions to safeguard U.S. assets at home and abroad. With over 30 years' experience protecting some of the Nation's most critical infrastructure, and field offices across 36 U.S. states, we offer unparalleled access and value for our clients on a national, regional, and local basis.
